CSO 2000

HORIZONTAL WRAPPER

A horizontal wrapper, also called a horizontal ring wrapper, is the ideal solution for horizontal packaging of long goods such as profiles, planks or doors. The load is packaged securely, making it impossible to move within the packaging.

The horizontal wrapping machine can also be used as a bundling machine. By bundling the products, the risk of damage is reduced, because the products cannot move together.

The CSO 2000 is a semi-automatic horizontal film wrapping machine for packaging and / or bundling (usually long) products with wrapping film. The products are fed through manually.

Options

- Extra film carriage
- Automatic clamping and cutting function
- Input and output roller conveyors
- Side guides, manually adjustable
- Mechanical pressure roller, manually adjustable
- Film welding unit

Technical data

Ring diameter	Ø 2000 mm
Film width	250 mm
Core diameter film	76 mm
Speed	Up to 30 rotations/minute
Drive	Belt
Power supply	230 V, 50 Hz, 1 phase
Control	Start & Stop foot pedal
